

# Khaleedh Khan Pathan

## ASPIRING DATA ENGINEER

### Objective

Computer Science graduate with strong leadership, collaboration, and time management skills, passionate about Data Engineering and Data Science. Dedicated to leveraging technical expertise and analytical problem-solving to design robust data pipelines, extract actionable insights, and deliver impactful, data-driven solutions.

### Education

|           |                                                                                                                             |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| 2021-2025 | <b>Sree Vidyanikethan Engineering College</b><br><b>B.Tech in Computer Science and Systems Engineering</b><br>CGPA: 8.92/10 |
| 2019-2021 | <b>Sri Chaitanya Junior College</b><br><b>Intermediate(10+2) Maths, Physics and Chemistry</b><br>Percentage: 93.5           |
| 2018-2019 | <b>Maharshi Vidyanikethan High School</b><br><b>Secondary School Certificate</b><br>CGPA: 9.8/10                            |

### Internships

|                     |                                                                                                                                                                   |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Apr 2024 - Jun 2024 | <b>Cloud Networking Intern – JUNIPER NETWORKS</b><br>Gained hands-on experience with cloud networking fundamentals, virtual labs, and Juniper cloud architecture. |
| May 2023 - Jul 2023 | <b>AI Intern – AWS ACADEMY</b><br>Developed foundational AI/ML skills through AWS tools, covering supervised learning and real-world data projects.               |

### Projects

|                     |                                                                                                                                                                                                                                                                                                                                              |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Dec 2024 - Mar 2025 | <b>DECENTRALIZED AI-BASED HEART DISEASE PREDICTION SYSTEM USING ETHEREUM BLOCKCHAIN</b> <ul style="list-style-type: none"><li>Built scalable pipelines to ingest and process real-time patient data with Python (XGBoost, Flask).</li><li>Integrated ML outputs with blockchain to ensure secure, reliable ETL and data integrity.</li></ul> |
| May 2024 - Jun 2024 | <b>SPOTIFY CLONE</b> <ul style="list-style-type: none"><li>Built data pipelines to fetch, process, and manage music metadata from the Spotify API.</li><li>Optimized data retrieval and storage for streaming, search, and playlists using JavaScript and efficient front-end frameworks.</li></ul>                                          |

|                            |                         |                                                                                                                                                                                                                                                                                                             |
